

threshold independent of ΔR and ΔI

drift independent of ΔR and ΔI

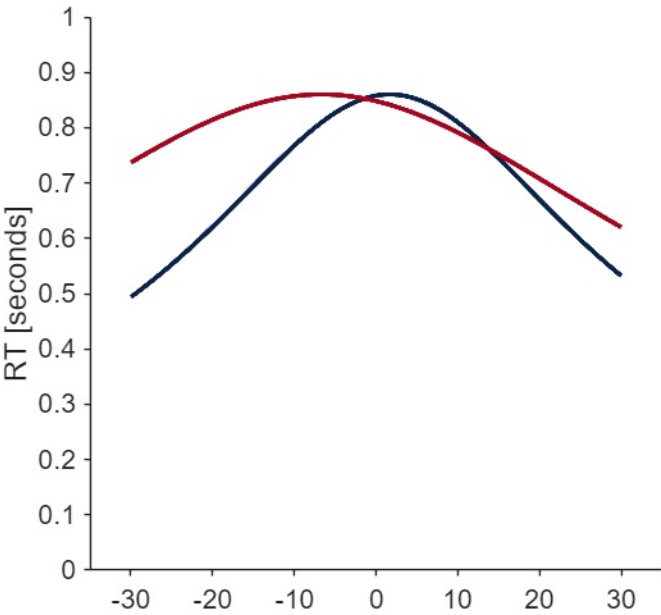

$c_R^\beta = c_l^\beta = 0$

$c_R^\mu = c_l^\mu = 0$

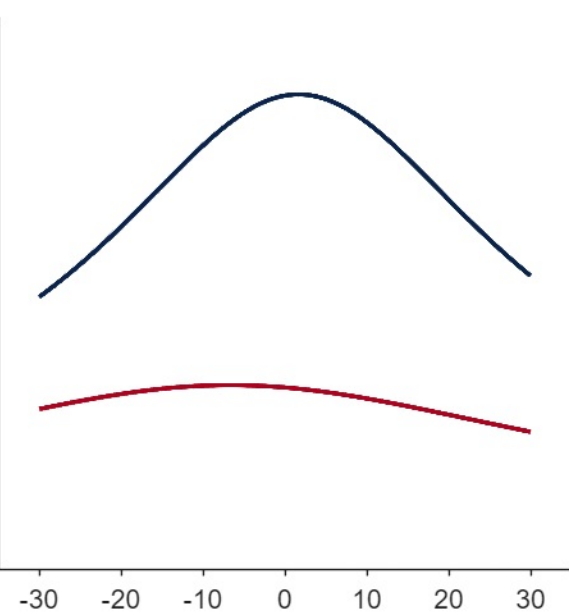

choice curves all cases

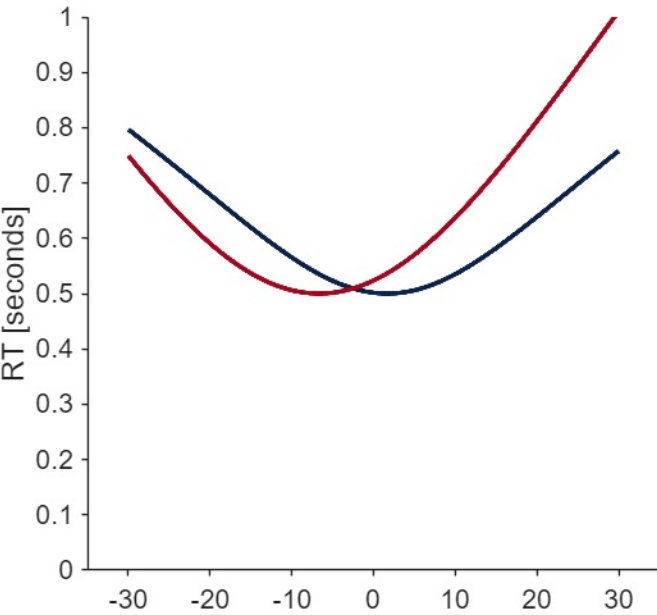

drift change, c_R^μ

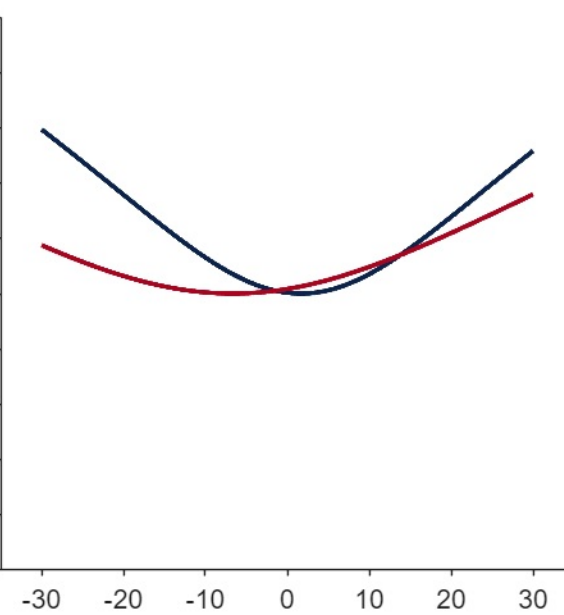

threshold change, c_0^β

drift change, c_0^μ

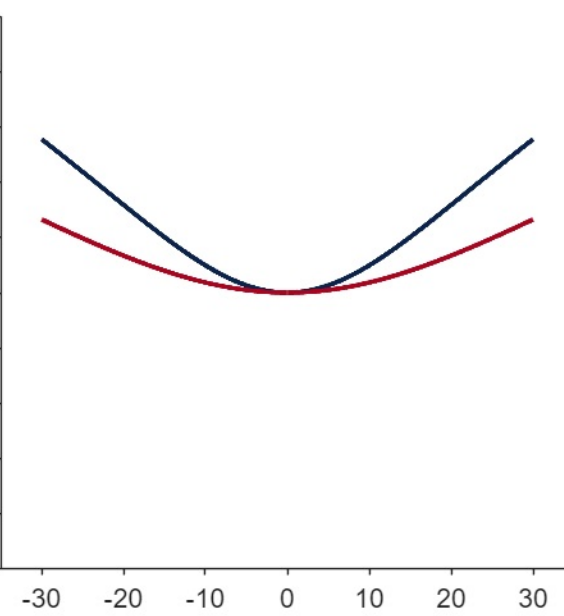

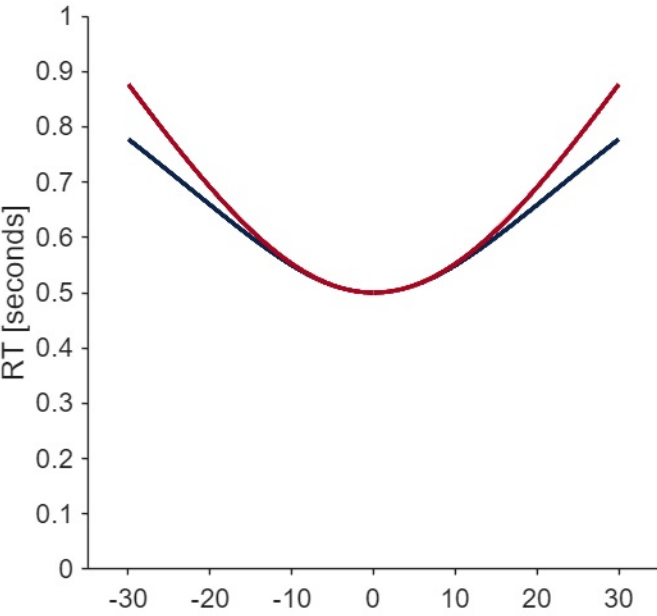

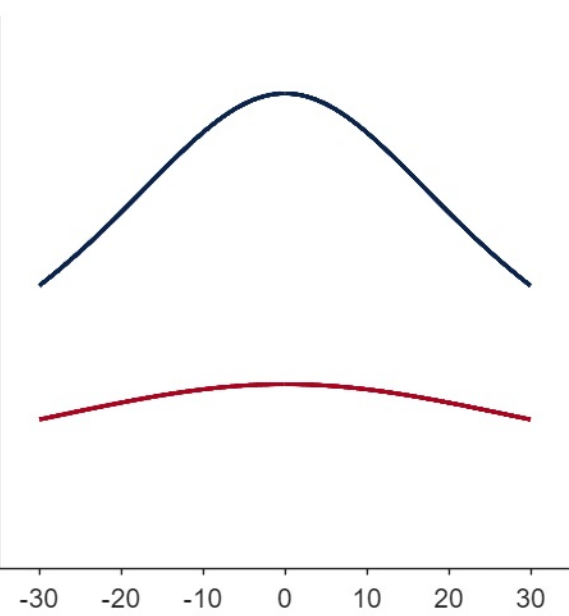

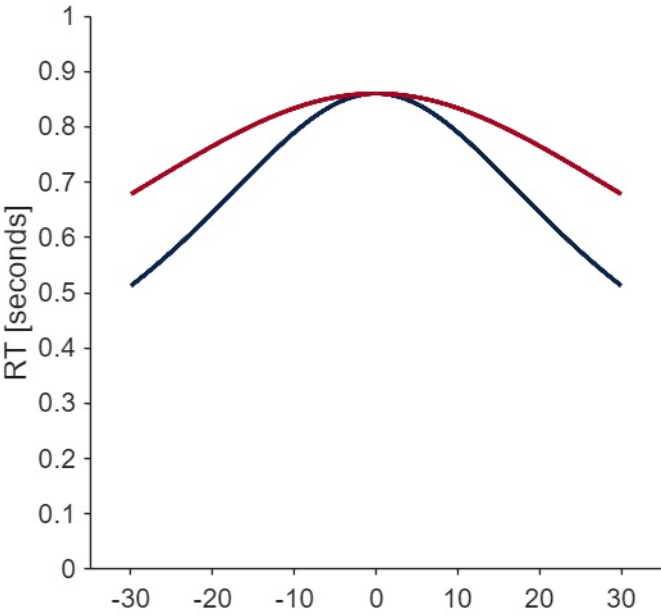

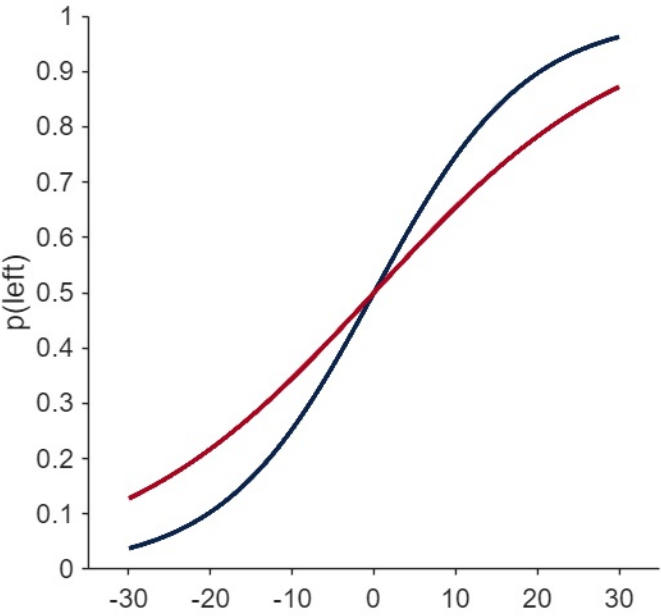

threshold change, c_R^β

unequal condition [1 3]

difference in mean reward, $R(\text{high info}) - R(\text{low info})$

equal condition [2 2]

difference in mean reward, $R(\text{left}) - R(\text{right})$
